Recent Research Projects

Analysis of Momentum SGD — Oct. 2022 – Pres.
CISPA, Supervisor: Sebastian Stich — Saarbrücken, Germany
Brief description: development of a class of functions where Momentum SGD is provably better than vanilla SGD.

Analysis of Gradient-type methods over directed graphs — Apr. 2022 – Aug. 2022
EPFL, Supervisor: Hadrien Hendrikx, Links: technical report — Lausanne, Switzerland
Brief description: development of a theory for gradient-type methods over directed graphs. The goal is to create a method which supports stochastic updates, variance reduction and acceleration and whose convergence rates match optimal rates in undirected case.

Adaptive stepsize selection for PDHG algorithm — Sept. 2021 – Mar. 2021
IP Paris, Supervisor: Olivier Fercoq, Links: technical report — Palaiseau, France
Brief description: the goal is to develop a mechanism for adaptive stepsize selection for PDHG. The idea is based on checking in each iteration the Quadratic Error Bound inequality introduced in [Fercoq, 2021].

Second Order Methods for Distributed Optimization — Jul. 2020 – Dec. 2020
KAUST, Supervisor: Peter Richtárik — Thuwal, Saudi Arabia
Brief description: development of a theory for Newton-type methods for distributed optimization. The goal is to create the first communication-efficient Newton-type method that inherits its local superlinear convergence. As a part of internship, I attended the course on modern analysis of a family SGD algorithms by Prof. Richtárik.
